

brillianz BayLite brightens bar

brillianz lighting solutions has extended its reach to Portugal by lighting up the Arte Bar, a local venue situated in Albufeira, in the Algarve. As well as illuminating the outside decking area, **brillianz** is now providing cutting edge indoor LED lighting to spotlight the stage for the live singers that perform there regularly.

The business had previously recognised and appreciated the cost reducing benefits of **brillianz** lighting products. After installing **brillianz** BayLite to for the outside decking area, the bar is now reaping the benefits of running energy efficient LED lighting indoors as well. The bar owner, Maria described how this has made significant savings for the business, whilst creating a phenomenal amount of high quality bright light.

brillianz BayLite operates on a low cost low maintenance basis, with over 50,000 hours of operating life, so as Maria stated, "this light looks like it will be the longest standing asset to the bar!"

As well as cost savings Maria describes how this **brillianz** LED light is much easier to maintain than their old lighting. They now do not need to worry about bulbs failing and having to change them which typically meant getting the ladder out when the bar was quiet.

Arte bar has used **brillianz** LED BayLite not only to light up the performers' stage but simultaneously reduce the amount of heat generated by the old lighting, to make performing much more comfortable for the singers. Maria explained "The singers used to have to take breaks much more often because of the heat from the stage lights. Now they only stop to get a drink. They really appreciate the "cool" new well lit stage!"

The reduced amount of heat generated from **brillianz** LED lighting has also cut significantly the air conditioning costs for the business. Now the bar does not need to worry about removing the heat produced by the old halogen spotlights - a great way to further decrease operating costs!
